NuStart

NuStart
For the start of a lifetime

“A natural performance enhancer – for the start of a lifetime”

Getting animals off to a good start will contribute to replacement heifers calving down at 24 months, well grown beef animals, or lambs reaching target weights on time.

The main focus areas in the first few weeks of life are health, rumen development and growth. The natural supplement NuStart, developed by Provimi, allows young ruminants ‘the start of a lifetime’.

NuStart is a unique combination of essential oils, prebiotics, functional fibres, and natural antioxidants (Proviox™ 50). It also includes a precise profile of vitamins and trace elements required by young ruminants.

NuStart is used in all ProviMilk Calf and Lamb milk replacers and is available for use in starter feeds. This provides a strong link between liquid and solid feeding which aids a smooth and successful weaning process.

ADVANTAGES

NuStart supports development of young ruminants in a variety of ways:

- Supports healthy gut microflora
- Aids rapid rumen development
- Increases dry feed intake

BENEFITS

Performance

- Enhances solid feed intake and improves feed conversion efficiency
- Promotes rumen development to reduce any checks in growth at weaning
- NuStart incorporated in lamb starter resulted in two weeks earlier to finish and in calf milk replacer resulted in a 17% improvement in growth rate and 9kg heavier at 12 weeks

Health

- Balance of beneficial gut microflora aiding efficient digestion
- Proviox™ 50 can complement and regenerate vitamin E and can boost immunity during the critical pre-weaning phase

Successful weaning

- NuStart aids in developing the digestive system and reducing a check in growth at weaning
- Improved performance in early life reduces overall cost per kg growth and increases profit
