

# Refresh

A refreshing rehydrating (electrolyte) drink for cows directly after calving.

A complementary feedstuff for cattle designed to rehydrate and restore electrolytes in the cow directly after calving. It stimulates water intake, supplies easily absorbed energy and contains readily available calcium to support the start of lactation.

## **Composition:**

Dextrose, whey powder, limestone, salt, grape pip-concentrate.

## **Analytical Constituents:**

Crude protein 8%, Crude oil & fat 0.4%, Crude fibre <0.1%, Ash 31.1%, Calcium 4%, Sodium 4.3%.

## **Technical Interest:**

**Rehydrate and restore electrolytes:** To support the cow following calving.

**Low dry matter intake:** The days before calving the cow is physically not able to eat enough to supply all energy and nutrients needed.

**Requirements change:** Directly after calving the cow needs significantly more calcium and energy to start the milk production.

Dextrose

Essential electrolytes

Gives an energy boost

Support electrolyte balance

Support start of lactation

Support liver and rumen function

Calcium

Lift and Amaferm

Amaferm™

# Refresh

A refreshing rehydrating (electrolyte) drink for cows directly after calving.

## Benefits:

- ✓ Support liver function and fibre digestion in the rumen
- ✓ Rehydrate and restore electrolyte balance
- ✓ Provide energy and available calcium

**FAST**

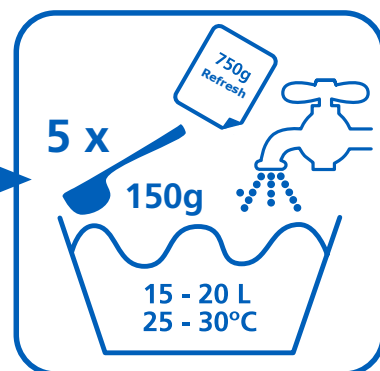

Quick results

**EASY**

Quick to prepare and can be fed straight after calving

**EFFECTIVE**

Support milk production and cow health

**Pack Sizes:**  
750g sachets  
and  
18kg buckets

## Instructions for use:

Feed cows **Refresh** immediately after calving. Dissolve 750g (5 scoops or 1 sachet) of **Refresh** in 15-20 litres of water (25°-30°C).

## Storage:

Store in cool and dry place away from direct light. Keep out of the sight and reach of children.

## Shelf Life:

750g sachet: 24 months after date of manufacturing.  
18kg bucket: 12 months after date of manufacturing.
